

DOES YOUR HUSBAND SNORE?

GET THE SLEEP YOU DESERVE

Over 80% of people who snore have Sleep Apnea. Sleep Apnea means your husband is not breathing throughout the night and this leads to life-threatening illnesses, increased risk for stroke, heart disease, diabetes, and weight gain. Bed partners of snorers also experience fatigue & related symptoms.

Sleep Apnea can be treated with an Oral Appliance.

It is a mouth guard that repositions the jaw to open the airway for relief from snoring & Sleep Apnea.
